

iGT Portfolio Extracts

1. Background

Centrica has identified not all IGTs provide 'planned' status MPR portfolio data in the monthly portfolio extract. Following an initial review, planned meter points appear to be allowed in the Extract. The definition of the MPR on the Extract specifically states the words "or will be" connected to the gas network and the Meter Point Status Code has a definition PL - Planned.

2. Code Rules

Part G 20 Portfolio Extract

20.1 The Pipeline Operators shall provide a Portfolio Extract to each Pipeline User by the fifth Business Day of each month with details of Supply Meter Points as of the first Business day of that month. The Portfolio Extract shall be issued in either comma separated value or Microsoft Excel spreadsheet format.

Appendix G

MPR - DEFINITION: A system generated unique identifier for the point at which a meter is, has been or will be connected to the gas network.

Meter Point Status Code - Definitions CA - Capped; DE -Dead; LI - Live; OT -Other; PL - Planned;
SP -Spin Capped

3. SSP arrangements

Centrica understood that a major benefit of the SSP new Connections process was to clarify what current and future responsibility a shipper has for existing and new connection Supply Points. It was expected this information would be published in whole on the Portfolio Extract once the Shipper has accepted the PS1.

We would welcome input from shippers and IGTs for their understanding and suggested ways forward.
