AQ Review Process – Indigo Pipelines

The original issue Indigo Pipelines raised with the other IGTs on 30/04/18 was:

The IGT UNC procedure states the following:

The following should be EXCLUDED from the AQ data:
o Infill domestic property AQs.
o Non-domestic property AQs.
o There was no AQ change because the site became less than 9 months prior to the cut off read date for the potential revision of the FYAQ.
o There were no reads with which to calculate the AQ.

Questions for the Workgroup;

- What is Xoserve's 'Read Cut Off Date'?
- How would an IGT know if Xoserve had reads or not to use in the calculation?
- Is it simply a case of excluding any MPRNs where last year's FY AQ has been rolled over to this year?

There was unanimous agreement amongst the IGTs that the only way to approach this was to exclude any Supply Points from the reporting where there was no change to the FYAQ.

My suggestion therefore is to remove the 2 highlighted lines from Code and replace them with a comment along the lines of "where the FYAQ has not changed from the previous year's FYAQ"

The Workgroup is asked to;

- **DISCUSS** the questions raised in this paper; and
- **SUGGEST** a possible solution which will be reported back to Indigo Pipelines.
