

Consultation Response

IGT139: Introducing a new User type to the IGT UNC and the Data Permissions Matrix of Electricity System Operator (ESO)

Responses invited by: 20 May 2020

Respondent Details

Name: Kirsty Dudley

Organisation: E.ON

Support Implementation ☒

Qualified Support ☐

Neutral ☐

Do Not Support ☐

Please briefly summarise the key reason(s) for your support / opposition

We support the inclusion of the ESO into the Data Permissions Matrix and being recognised as a new user.

We support objective f relating to efficiency in the code but as this is only adding a new user recognition, we don't believe it meets objective d, this instead relates to the activity completed by the CoMC.

Self-Governance Statement

Do you agree with the Modification Panel's determination with respect to whether or not this should be a self-governance modification?

We support the self-governance as this is just adding them as a new user.

Please state any new or additional issues that you believe should be considered

None.

Relevant Objectives

How would implementation of this modification impact the relevant objectives?

We mirrored the relevant objectives which were outlined in the UNC modification, however, as the delivery of the actual data is via the CoMC we don't believe it truly facilitates objective d but we do support the delivery of objective f.

Impacts and Costs

What development and ongoing costs would you face if this modification was implemented?

As this is a permissions modification there are no costs associated.

Implementation

What lead time would you wish to see prior to this modification being implemented, and why?

We support a joint IGT UNC and UNC implementation with the same coordinated date, this we believe better facilitates the CoMC. If approved at separate times the CoMC cannot approve until the last modification approval is given.

Legal Text

Are you satisfied that the legal text will deliver the intent of the modification?

No comments.

Further Comments

Is there anything further you wish to be taken into account?
