UNC Modification 0922 / IGT UNC
Modification 180 – CDSP Obligations
for the introduction of the GSO -
Update

Update – May 2026

X Background

- Modifications (UNC 0922 and IGT UNC Mod 180) were raised in January as transitional Mods in order to create obligations for the CDSP to:
 - Perform development activities for the GSO Scheme
 - Support a Live Data Testing period with the GSO Scheme Admin
 - Release of data to parties requiring this to implement the Scheme
 - Clarified the costs of doing so would be CDSP Costs
- Explicit within the UNC and IGT UNC Mods was that enduring DSC Service Lines would be introduced by subsequent UNC and IGT UNC Modifications – effectively removing the transitional elements of the obligations placed on the CDSP

X Update

- Since the Modifications were raised the Workgroups have been deferred due to the delay in **DESNZ** publication of GSO consultation response
 - The consultation response is not expected to change the CDSP Activities in support of the GSO Scheme, and the delay is caused by matters unrelated to the GSO Scheme and the exemption scheme
 - GSO Scheme is still expected to be implemented in 2027
- As the Modifications have not been progressed an alternative CDSP Funding route is proposed for the development activities but the enduring obligations are still proposed to be DSC Services undertaken by the CDSP
- We propose to submit the Enduring Modifications to establish the DSC Service Lines, expect that the existing Transitional Mods will be withdrawn as these elements will be encompassed in the Enduring Modifications

Thank you!
